

How to run the script « vancittert.pgm »

```
*****  
SCRIPT : Processing of an image by the vancittert method. You are advised to use this script  
with the Moon  
*****
```

What you have to do :

- it's necessary to have a composite raw image of the Moon
- then run this script : >run vancittert \$1

example : >run vancittert moonimage

```
*****  
Parameters of the script :  
*****
```

\$1 = name of the image you want to process with the vancittert method

```
*****
```

The script uses several strengths of processing with the Vancittert method
